## 2. Description of Project

### 2.1 Nature and objectives of the project:

Assess the stock of Northeast Atlantic mackerel by swept area trawl survey method (International Ecosystem Summer Survey in the Nordic Seas, IESSNS) in July 2013. Three parties (Iceland, Faroes and Norway) with four vessels (one research vessel and three commercial trawlers, see text table below) take part in the survey, coordinated by the "Working Group of International Pelagic Surveys" (WGIPS) in ICES. The aim is to use the results in the assessment of mackerel by the "Working Group on Widely Distributed Stocks (Blue Whiting, NEA Mackerel, horse mackerel, and Norwegian spring spawning Herring)" [WGWIDE] in August 2013.

Map, showing the survey area, cruise tracks and trawl stations (triangles) for the different participating vessels for the joint International cruise in July-August 2012. Similar coverage will be done in 2013, but with some extensions further south. The coordination is within the ICES WGIPS with the participation of four vessels from three parties (NO, FA, IC). The Faroese in 2012, M/V "Christian í Grótinum" is shown as black triangles.
